

Announcing The OPSIG's First Book

A Complete Reference for All Things Time Table & Train Order!

Now Shipping!

A 150 page, full-color book with a soft cover

If you are interested in learning more about how you can employ Time Table & Train Order (TT&TO) operations on your railroad, this book is for you! Within its pages you will find, explained in clear detail, all the rules, secrets, explanations and methodology of this arcane, challenging and rewarding form of train dispatching.

The first section of this book is a reprint of the seminal series authored by noted professional David Sprau and first published in the Operation SIG's quarterly magazine, taking you step by step through the thinking, design and implementation of TT&TO.

The second section, by well-known author and teacher Steve King, describes how to apply TT&TO to the model environment. Sprinkled throughout are techniques, short cuts and examples of this fascinating practice.

A complete reference and instruction manual, *19 East, Copy Three* is a must-have for any serious modeler who would at least like to understand the system that at one time controlled more than two-thirds of rail lines in the United States.
